British Library Cataloguing in Publication Data

A catalogue record for this book is available from the British Library

ISBN-13 978-0-470-01786-9 (Cloth) 978-0-470-01787-6 (Paper)

ISBN-10 0-470-01786-4 (Cloth) 0-470-01787-2 (Paper)

Typeset by the author using L^AT_EX

Printed and bound in Great Britain by Antony Rowe, Chippenham, Wiltshire

This book is printed on acid-free paper responsibly manufactured from sustainable forestry in which at least two trees are planted for each one used for paper production.

Contents

1	What this book is about and who should read it	1
1.1	How this book is organized	2
1.2	Scope and limitations	3
1.3	Context and further reading	3
1.4	On-line resources	4
1.5	Abbreviations	4
2	Setting the scene	5
2.1	NMR frequencies and chemical shifts	5
2.1.1	Chemical shift scales	6
2.1.2	Conversion from shifts to frequencies	7
2.1.3	The receiver reference frequency and the offset frequency	8
2.2	Linewidths, lineshapes and integrals	9
2.3	Scalar coupling	10
2.3.1	Tree diagrams	10
2.4	Weak and strong coupling	12
2.5	The basic NMR experiment	14
2.5.1	Heteronuclear NMR and broadband decoupling	15
2.6	Frequency, oscillations and rotations	17
2.6.1	Motion in a circle	17
2.6.2	Frequency	17
2.6.3	Angular frequency	18
2.6.4	Phase	19
2.6.5	Representation using complex numbers	21
2.7	Photons	21
2.8	Moving on	22
2.9	Further reading	22
2.10	Exercises	23
3	Energy levels and NMR spectra	25
3.1	The problem with the energy level approach	26
3.1.1	Wavefunctions and mixed states	26
3.1.2	Energy levels in NMR	27
3.2	Introducing quantum mechanics	28
3.2.1	Wavefunctions	28

3.2.2	Operators	29
3.2.3	Eigenfunctions and eigenvalues of operators	30
3.2.4	Measurement	30
3.2.5	Hamiltonians and angular momentum	31
3.2.6	Eigenfunctions and eigenvalues of \hat{I}_z	31
3.2.7	Eigenvalues for the one-spin Hamiltonian	32
3.2.8	Summary	33
3.3	The spectrum from one spin	33
3.3.1	Energy levels	33
3.3.2	The Larmor frequency	34
3.3.3	Writing the energies in frequency units	35
3.4	Writing the Hamiltonian in frequency units	36
3.5	The energy levels for two coupled spins	37
3.5.1	Introducing scalar coupling	39
3.6	The spectrum from two coupled spins	40
3.6.1	Multiple-quantum transitions	42
3.7	Three spins	43
3.7.1	The Hamiltonian and energy levels	43
3.7.2	Single quantum spectrum	44
3.7.3	Multiple quantum transitions	44
3.7.4	Combination lines	46
3.8	Summary	46
3.9	Further reading	47
3.10	Exercises	48
4	The vector model	51
4.1	The bulk magnetization	51
4.1.1	Axis systems	53
4.1.2	The equilibrium magnetization	53
4.2	Larmor precession	54
4.3	Detection	55
4.4	Pulses	56
4.4.1	Rotating frame	57
4.4.2	Larmor precession in the rotating frame	59
4.4.3	The effective field	59
4.4.4	The effective field in frequency units	60
4.4.5	Summary	61
4.5	On-resonance pulses	62
4.5.1	Hard pulses	63
4.6	Detection in the rotating frame	64
4.7	The basic pulse-acquire experiment	64
4.7.1	Spectrum with several lines	65
4.8	Pulse calibration	66
4.9	The spin echo	67
4.9.1	180° pulses as refocusing pulses	68
4.9.2	How the spin echo works	68
4.10	Pulses of different phases	70
4.11	Off-resonance effects and soft pulses	71

29			
30			
30		4.11.3	Selective inversion 75
31		4.12	Moving on 75
31		4.13	Further reading 76
32		4.14	Exercises 77
33			
33		5	Fourier transformation and data processing 81
33		5.1	How the Fourier transform works 82
34		5.1.1	Mathematical formulation of the Fourier transform 85
35		5.2	Representing the FID 86
36		5.3	Lineshapes and phase 87
37		5.3.1	Absorption and dispersion lineshapes 88
39		5.3.2	Phase 90
40		5.3.3	Phase correction 92
42		5.3.4	Frequency dependent phase errors 92
43		5.4	Manipulating the FID and the spectrum 94
43		5.4.1	Noise 94
44		5.4.2	Sensitivity enhancement 96
44		5.4.3	The matched filter 98
46		5.4.4	Resolution enhancement 98
46		5.4.5	Defining the parameters for sensitivity and resolution enhancement functions 100
47		5.4.6	'Lorentz-to-Gauss' transformation 102
48		5.4.7	Other weighting functions 102
51		5.5	Zero filling 103
51		5.6	Truncation 104
53		5.7	Further reading 105
53		5.8	Exercises 106
54			
55		6	The quantum mechanics of one spin 109
56		6.1	Introduction 109
57		6.2	Superposition states 110
59		6.3	Some quantum mechanical tools 111
59		6.3.1	Dirac notation 111
60		6.3.2	Normalization and orthogonality 112
61		6.3.3	Expectation values 113
62		6.3.4	The x - and y -components of angular momentum 115
63		6.3.5	Matrix representations 115
64		6.4	Computing the bulk magnetization 116
64		6.4.1	The ensemble average 117
65		6.4.2	Populations 119
66		6.4.3	Transverse magnetization 120
67		6.5	Summary 121
68		6.6	Time evolution 123
68		6.6.1	Free evolution 123
70		6.6.2	Effect of free evolution 126
71		6.7	RF pulses 127

6.7.1	Effect on the components of angular momentum	128
6.7.2	Effect on the components of the bulk magnetization	129
6.8	Making faster progress: the density operator	130
6.8.1	Introducing the density operator	131
6.8.2	Calculating the components of the bulk magnetization	132
6.8.3	Equilibrium density operator	132
6.8.4	Time evolution of the density operator	133
6.8.5	Representing the density operator using a basis of operators	133
6.8.6	The equilibrium density operator – again	135
6.8.7	Summary	137
6.9	Coherence	138
6.10	Further reading	139
6.11	Exercises	140
7	Product operators	143
7.1	Operators for one spin	143
7.1.1	Hamiltonians for free precession and pulses	144
7.1.2	Rotations	145
7.2	Analysis of pulse sequences for a one-spin system	147
7.2.1	Pulse-acquire	147
7.2.2	The spin echo	149
7.3	Speeding things up	150
7.3.1	90° and 180° pulses	150
7.3.2	Diagrammatic representation	151
7.3.3	The 1 – \bar{I} sequence	152
7.4	Operators for two spins	153
7.4.1	Effect of coupling	154
7.5	In-phase and anti-phase terms	156
7.5.1	In-phase terms	157
7.5.2	Anti-phase terms	158
7.5.3	Observable terms	160
7.6	Hamiltonians for two spins	161
7.7	Notation for heteronuclear spin systems	161
7.8	Spin echoes and J -modulation	162
7.8.1	Spin echo in a homonuclear spin system	163
7.8.2	Spectra from a J -modulated spin echo	166
7.8.3	Spin echoes in heteronuclear spin systems	168
7.9	Coherence transfer	170
7.10	The INEPT experiment	171
7.10.1	Why the experiment was developed	171
7.10.2	Analysis of the INEPT experiment	172
7.10.3	Decoupling in the INEPT experiment	174
7.10.4	Suppressing the signal from the equilibrium magnetization on the S spin	174
7.11	Selective COSY	176
7.12	Coherence order and multiple-quantum coherences	178

128	7.12.1	Raising and lowering operators: the classification of coherence order	178
129	7.12.2	Generation of multiple-quantum coherence	180
130	7.12.3	Evolution of multiple-quantum coherence	180
131	7.13	Summary	182
132	7.14	Further reading	183
132	7.15	Exercises	184
133			
133	8	Two-dimensional NMR	187
135	8.1	The general scheme for two-dimensional NMR	188
137	8.1.1	How two-dimensional spectra are recorded	189
138	8.1.2	How the data are processed	189
139	8.2	Modulation and lineshapes	190
140	8.2.1	Cosine amplitude modulated data	191
	8.2.2	Sine amplitude modulated data	192
	8.2.3	Mixed cosine and sine modulation	193
143	8.3	Axes and frequency scales in two-dimensional spectra	194
143	8.4	COSY	194
144	8.4.1	Overall form of the COSY spectrum	195
145	8.4.2	Detailed form of the two-dimensional multiplets	196
147	8.4.3	Phase properties of the COSY spectrum	201
147	8.4.4	How small a coupling can we detect with COSY?	202
149	8.4.5	The problem with COSY	203
150	8.5	Double-quantum filtered COSY (DQF COSY)	204
150	8.6	Double-quantum spectroscopy	208
151	8.6.1	Detailed analysis of the pulse sequence	209
152	8.6.2	Interpretation and application of double-quantum spectra	210
153	8.6.3	INADEQUATE	211
154	8.7	Heteronuclear correlation spectra	213
156	8.7.1	Normal or inverse correlation	213
157	8.8	HSQC	214
158	8.8.1	Coupled or decoupled acquisition	216
160	8.8.2	Suppressing unwanted signals in HSQC	216
161	8.8.3	Sensitivity	217
162	8.9	HMQC	217
163	8.10	Long-range correlation: HMBC	220
166	8.10.1	Suppressing one-bond peaks in HMBC spectra	222
168	8.11	HETCOR	225
170	8.12	TOCSY	226
171	8.12.1	TOCSY for two spins	227
171	8.12.2	TOCSY for more extended spin systems	230
172	8.13	Frequency discrimination and lineshapes	231
174	8.13.1	Obtaining cosine and sine modulated data	232
	8.13.2	P- and N-type selection: phase-twist lineshapes	233
174	8.13.3	The States-Haberkorn-Ruben method	235
176	8.13.4	The TPPI or Redfield method	236
178	8.13.5	The States-TPPI method	239

8.13.6	Phase in two-dimensional spectra	240
8.14	Further reading	242
8.15	Exercises	243
9	Relaxation and the NOE	245
9.1	What is relaxation?	246
9.1.1	Behaviour of individual magnetic moments	247
9.1.2	Local fields	248
9.1.3	Coming to equilibrium with the lattice	250
9.1.4	Transverse relaxation	251
9.1.5	Summary	252
9.2	Relaxation mechanisms	253
9.2.1	The dipolar mechanism	254
9.2.2	Chemical shift anisotropy	254
9.2.3	Relaxation by paramagnetic species	255
9.3	Describing random motion – the correlation time	255
9.3.1	The correlation function	257
9.3.2	The spectral density	260
9.3.3	Motional regimes	262
9.3.4	Transverse relaxation and the spectral density at zero frequency	263
9.3.5	Summary	263
9.4	Populations	264
9.4.1	The z-magnetization in terms of populations	264
9.4.2	Relaxation in terms of populations	266
9.5	Longitudinal relaxation behaviour of isolated spins	268
9.5.1	Estimating the rate constant for longitudinal relaxation	270
9.5.2	Making a quick estimate of the relaxation rate constant	271
9.5.3	How long do I have to leave between experiments?	271
9.6	Longitudinal dipolar relaxation of two spins	273
9.6.1	Energy levels and transition rates	273
9.6.2	Rate equations for the populations and z-magnetizations	274
9.6.3	Relaxation rate constants	277
9.6.4	Cross relaxation in the two motional regimes	278
9.7	The NOE	279
9.7.1	The transient NOE experiment	280
9.7.2	The steady-state NOE experiment	284
9.7.3	Heteronuclear steady-state NOE	285
9.7.4	Two-dimensional NOESY	286
9.7.5	The NOE in more extended spin systems	290
9.8	Transverse relaxation	291
9.8.1	Different contributions to transverse relaxation	293
9.8.2	Relaxation by random fields	293
9.8.3	Transverse dipolar relaxation of two spins	295
9.8.4	Transverse cross relaxation: ROESY	296

240	9.9 Homogeneous and inhomogeneous broadening	299
242	9.9.1 Describing inhomogeneous broadening: T_2^*	302
243	9.9.2 Measuring the transverse relaxation rate constant	303
245	9.10 Relaxation due to chemical shift anisotropy	303
246	9.10.1 Specifying the CSA	303
247	9.10.2 Relaxation rate constants due to CSA	304
248	9.11 Cross correlation	305
250	9.11.1 Cross correlation in longitudinal relaxation	305
251	9.11.2 Cross correlation in transverse relaxation	308
252	9.12 Summary	310
253	9.13 Further reading	310
254	9.14 Exercises	312
254	10 Advanced topics in two-dimensional NMR	317
255	10.1 Product operators for three spins	318
255	10.1.1 Interpretation of the product operators for three spins	319
260	10.1.2 Evolution due to offsets and pulses	321
262	10.1.3 Evolution of couplings	321
263	10.2 COSY for three spins	323
263	10.2.1 Structure of the cross-peak multiplets	324
264	10.3 Reduced multiplets in COSY spectra	328
264	10.3.1 COSY for a three-spin system containing one heteronucleus	328
266	10.3.2 Determining the relative signs of the passive coupling constants	331
268	10.3.3 Measuring the size of the passive coupling constants	332
270	10.3.4 Reduced multiplets in homonuclear spin systems	334
271	10.4 Polarization operators	335
271	10.4.1 Construction and interpretation of polarization operators	335
273	10.4.2 Free evolution	336
273	10.4.3 Pulses	337
274	10.4.4 Small flip angle COSY	338
277	10.5 ZCOSY	343
278	10.6 HMBC	345
279	10.7 Sensitivity-enhanced experiments	347
280	10.7.1 Sensitivity-enhanced HSQC	348
284	10.8 Constant time experiments	352
285	10.8.1 Constant time COSY	352
286	10.8.2 Constant time HSQC	355
290	10.9 TROSY	357
291	10.9.1 Line-selective transfer	358
293	10.9.2 Implementation of line-selective 180° pulses	360
293	10.9.3 A TROSY HSQC sequence	361
295	10.9.4 Processing the TROSY HSQC spectrum	362
296	10.10 Further reading	365

10.11 Exercises	366
11 Coherence selection: phase cycling and field gradient pulses	369
11.1 Coherence order	370
11.1.1 Possible values of the overall coherence order	371
11.1.2 Evolution of operators of particular coherence orders	372
11.1.3 The effect of pulses	373
11.1.4 Observables	374
11.2 Coherence transfer pathways	375
11.2.1 Coherence transfer pathways in heteronuclear experiments	376
11.3 Frequency discrimination and lineshapes in two-dimensional spectra	377
11.4 The receiver phase	379
11.5 Introducing phase cycling	383
11.5.1 Selection of a single pathway	384
11.5.2 Combining phase cycles	387
11.6 Some phase cycling 'tricks'	388
11.6.1 The first pulse	389
11.6.2 Grouping pulses together	389
11.6.3 The final pulse	390
11.6.4 High-order multiple-quantum terms	390
11.6.5 Refocusing pulses	390
11.7 Axial peak suppression	391
11.8 CYCLOPS	392
11.9 Examples of practical phase cycles	393
11.9.1 COSY	393
11.9.2 DQF COSY	394
11.9.3 Double-quantum spectroscopy	395
11.9.4 NOESY	395
11.9.5 HMQC	395
11.10 Concluding remarks concerning phase cycling	396
11.10.1 Summary	396
11.10.2 Deficiencies of phase cycling	396
11.11 Introducing field gradient pulses	397
11.11.1 The spatially dependent phase	399
11.11.2 Selection of a single pathway using two gradients	401
11.11.3 The spatially dependent phase in heteronuclear systems	402
11.11.4 Shaped gradient pulses	403
11.11.5 Dephasing in a field gradient	403
11.12 Features of selection using gradients	405
11.12.1 Selection of multiple pathways	405
11.12.2 Obtaining absorption mode lineshapes when gradients are used in t_1	405
11.12.3 Refocusing pulses	406
11.12.4 180° pulses in heteronuclear experiments	407

366	11.12.5 Phase errors due to gradient pulses	407
	11.12.6 Selection of z-magnetization	408
pulses 369	11.13 Examples of using gradient pulses for coherence pathway selection	409
370	11.13.1 DQF COSY	409
371	11.13.2 HMQC	410
372	11.13.3 HSQC	413
373	11.14 Advantages and disadvantages of coherence selection with gradients	414
374	11.15 Suppression of zero-quantum coherence	415
375	11.15.1 The z-filter	416
376	11.15.2 Implementation of z-filters in two-dimensional experiments	418
377	11.15.3 Zero-quantum dephasing	418
379	11.16 Selective excitation with the aid of gradients	420
383	11.16.1 The double pulsed field gradient spin echo	421
384	11.16.2 The DPGSE NOE experiment	421
387	11.17 Further reading	423
388	11.18 Exercises	425
389		
389	12 How the spectrometer works 429	
390	12.1 The magnet	429
390	12.1.1 Shims	430
390	12.1.2 The lock	431
391	12.2 The probe	432
392	12.3 The transmitter	432
393	12.3.1 Power levels and 'dB'	433
393	12.4 The receiver	434
394	12.5 Digitizing the signal	435
395	12.5.1 The analogue to digital converter	435
395	12.5.2 Sampling rates	436
395	12.5.3 Mixing down to a lower frequency	437
396	12.6 Quadrature detection	437
396	12.7 The pulse programmer	438
396	12.8 Further reading	439
397	12.9 Exercises	440
399		
gradients 401	A Some mathematical topics 441	
	A.1 The exponential function and logarithms	441
	A.2 Complex numbers	443
402	A.2.1 The complex exponential	444
403	A.3 Trigonometric identities	445
403	A.4 Further reading	446
