CONTENTS

PREFACE		ix
Chapter 1	THERMODYNAMIC AND ELECTROPHYSICAL PARAMETERS OF GAS FLOW BEHIND SHOCK WAVES	1
1.1	Calculation of the parameters of a real gas behind normal and oblique shock waves	1
1.2	Calculation of the parameters of an ideal gas behind a shock wave in hypersonic flow over a body	5
1.3	Calculation of the electrophysical parameters of air flow behind shock waves	6
Chapter 2	EFFECT OF NONEQUILIBRIUM PHYSICOCHEMICAL PROCESSES ON THE FLOW PARAMETERS BEHIND A SHOCK WAVE	14
2.1	Relaxation time of physicochemical processes. Flow behind shock waves with partially frozen degrees of freedom of molecules	14
2.2	Propagation of small perturbations in a relaxing medium	17

Chapter 3	EXPERIMENTAL INVESTIGATION OF UNSTEADY INTERACTION OF SHOCK WAVES IN A SHOCK TUBE	23
3.1	Shock tube for the investigation of interaction of shock waves	23
3.2	Optical methods of visualization and recording of flows in shock tubes	25
3.3	Pressure measurement behind a shock wave	26
3.4	Measurement of heat flow into the wall of a shock tube	28
3.5	Formation of a shock wave in a shock tube	30
3.6	Effect of boundary layer on flow parameters in a shock tube	39
3.7	Effect of boundary layer on the shape of the reflected shock wave	41
Chapter 4	INTERACTION OF SHOCK WAVES WITH A POROUS COMPRESSIBLE MEDIUM	48
4.1	Normal reflection of a shock wave from a wall covered by a porous compressible material	48
4.2	Calculation of shock wave parameters in a porous compressible medium	54
Chapter 5	REFLECTION OF SHOCK WAVES BY A PLANE SURFACE	63
5.1	Types of wave configurations upon reflection of shock waves	63
5.2	Comparison of experimental data with reflection calculations following the double- and triple-shock theories	67
5.3	Transition from one form of reflection to another	75
Chapter 6	DIFFRACTION OF A SHOCK WAVE AT A CONVEX CORNER	80
6.1	Specific features of the wave picture upon diffraction of shock waves	80
6.2	Shape of a shock wave during diffraction	89
6.3	Flow around a corner in an expansion fan during diffraction of shock waves	92
6.4	Pressure and heat flows at the wedge surface	94
Chapter 7	UNSTEADY INTERACTION OF SHOCK WAVES WITH CURVILINEAR SURFACES	97
7.1	Reflection of shock waves from curvilinear surfaces	97
7.2	Diffraction of shock waves at rounded corners	101

Chapter 8	NUMERICAL SIMULATION. INTERACTION OF SHOCK WAVES WITH A WEDGE AND DIFFRACTION AT A CONVEX CORNER	107
8.1	The shock-capturing method	107
8.2	Reflection of a shock wave from a wedge	115
8.3	Diffraction of shock waves at a convex corner upon strong deflection of the gas flow	124
8.4	Engineering estimate of pressure levels upon egression of shock waves into a diverging section of a flat channel	142
Chapter 9	NUMERICAL INVESTIGATION OF THE INTERACTION OF SHOCK WAVES WITH BODIES OF VARIOUS SHAPES	146
9.1	Interaction of a shock wave with a stationary cylinder or sphere	146
9.2	Interaction of a shock wave with a blunt body in supersonic flow (shock-on-shock problem)	159
Chapter 10	UNSTEADY INTERACTION OF DETONATION WAVES	167
10.1	Features of the structure of detonation waves	167
10.2	Diffraction of detonation waves	176
10.3	Calculation of triple-shock configurations arising from reflection of detonation waves	180
10.4	<i>Refraction of detonation waves</i>	181
10.5	Propagation of detonation waves in narrow channels	188
10.6	Reflection of an unsteady system: shock wave-combustion zone	195
