Contents

Preface to the Second Edition	ix
Preface to the First Edition	xi
Introduction	1
Chapter 1. Definition of Vertex Algebras	11
1.1. Formal distributions	11
1.2. Locality	16
1.3. Definition of a vertex algebra	20
1.4. First example: commutative vertex algebras	22
1.5. Bibliographical notes	23
Chapter 2. Vertex Algebras Associated to Lie Algebras	25
2.1. Heisenberg Lie algebra	25
2.2. The vertex algebra structure on π	28
2.3. Checking vertex algebra axioms	32
2.4. Affine Kac–Moody algebras and their vertex algebras	38
2.5. The Virasoro vertex algebra	42
2.6. Bibliographical notes	46
Chapter 3. Associativity and Operator Product Expansion	47
3.1. Goddard’s uniqueness theorem	47
3.2. Associativity	48
3.3. Operator product expansion	51
3.4. Examples of OPE	56
3.5. Bibliographical notes	61
Chapter 4. Applications of the Operator Product Expansion	63
4.1. A Lie algebra attached to a vertex algebra	63
4.2. $U(V)$ and a completion of the universal enveloping algebra	65
4.3. An associative algebra attached to a vertex algebra	69
4.4. Strong reconstruction theorem	70
4.5. Correlation functions	72
4.6. Bibliographical notes	74
Chapter 5. Modules over Vertex Algebras and More Examples	75
5.1. Modules over vertex algebras	76
5.2. Vertex algebras associated to one-dimensional integral lattices	80
5.3. Boson–fermion correspondence	85
5.4. Lattice vertex algebras	88

5.5.	Rational vertex algebras	90
5.6.	Twisted modules	91
5.7.	Constructing new vertex algebras	94
5.8.	Bibliographical notes	97
Chapter 6.	Vertex Algebra Bundles	99
6.1.	Motivation	99
6.2.	The group $\text{Aut } \mathcal{O}$	103
6.3.	Exponentiating vector fields	104
6.4.	Primary fields	108
6.5.	The main construction	111
6.6.	A flat connection on the vertex algebra bundle	117
6.7.	Bibliographical notes	120
Chapter 7.	Action of Internal Symmetries	121
7.1.	Affine algebras, revisited	121
7.2.	The general twisting property	124
7.3.	Description of the n -point functions and modules	128
7.4.	Bibliographical notes	131
Chapter 8.	Vertex Algebra Bundles: Examples	133
8.1.	The Heisenberg algebra and affine connections	133
8.2.	The Virasoro algebra and projective connections	137
8.3.	Kernel functions	141
8.4.	The gauge action on the Heisenberg bundle	146
8.5.	The affine Kac–Moody vertex algebras and connections	148
8.6.	Bibliographical notes	149
Chapter 9.	Conformal Blocks I	151
9.1.	Defining conformal blocks for the Heisenberg algebra	151
9.2.	Definition of conformal blocks for general vertex algebras	154
9.3.	Comparison of the two definitions of conformal blocks	158
9.4.	Coinvariants for commutative vertex algebras	161
9.5.	Twisted version of conformal blocks	163
9.6.	Appendix. Proof of Proposition 9.3.2	164
9.7.	Bibliographical notes	166
Chapter 10.	Conformal Blocks II	167
10.1.	Multiple points	167
10.2.	Functoriality of conformal blocks	169
10.3.	Chiral correlation functions	171
10.4.	Conformal blocks in genus zero	176
10.5.	Functional realization of Heisenberg conformal blocks	182
10.6.	Bibliographical notes	186
Chapter 11.	Free Field Realization I	187
11.1.	The idea	187
11.2.	Finite-dimensional setting	189
11.3.	Infinite-dimensional setting	195
11.4.	Bibliographical notes	202

Chapter 12. Free Field Realization II	203
12.1. Weyl algebras in the infinite-dimensional case	203
12.2. Local completion	208
12.3. Wakimoto realization	214
12.4. Bibliographical notes	219
Chapter 13. The Knizhnik–Zamolodchikov Equations	221
13.1. Conformal blocks in the Heisenberg case	221
13.2. Moving the points	225
13.3. Conformal blocks for affine Kac-Moody algebras	229
13.4. Bibliographical notes	232
Chapter 14. Solving the KZ Equations	233
14.1. Conformal blocks from the point of view of free field realization	233
14.2. Generalization: singular vectors	237
14.3. Finding solutions	240
14.4. Bibliographical notes	244
Chapter 15. Quantum Drinfeld–Sokolov Reduction and \mathcal{W} -algebras	245
15.1. The BRST complex	245
15.2. Proof of the main theorem	249
15.3. Examples	253
15.4. The second computation	255
15.5. Bibliographic notes	264
Chapter 16. Vertex Lie Algebras and Classical Limits	267
16.1. Vertex Lie algebras	267
16.2. Vertex Poisson algebras	271
16.3. Kac–Moody and Virasoro limits	273
16.4. Poisson structure on connections	275
16.5. The Virasoro Poisson structure	279
16.6. Opers	281
16.7. Classical Drinfeld–Sokolov reduction	285
16.8. Comparison of the classical and quantum Drinfeld–Sokolov reductions	288
16.9. Bibliographical notes	290
Chapter 17. Vertex Algebras and Moduli Spaces I	291
17.1. The flat connection on the vertex algebra bundle, revisited	292
17.2. Harish–Chandra pairs	295
17.3. Moduli of curves	300
17.4. Bibliographical notes	308
Chapter 18. Vertex Algebras and Moduli Spaces II	311
18.1. Moduli of bundles	311
18.2. Local structure of moduli spaces	317
18.3. Global structure of moduli spaces	318
18.4. Localization for affine algebras at the critical level	319
18.5. Chiral de Rham complex	324
18.6. Bibliographical notes	327

Chapter 19. Chiral Algebras	329
19.1. Some sheaf theory	329
19.2. Sheaf interpretation of OPE	334
19.3. Chiral algebras	337
19.4. Lie* algebras	342
19.5. Modules over chiral algebras	346
19.6. Global Kac–Moody and Virasoro algebras	347
19.7. Bibliographical notes	350
Chapter 20. Factorization	351
20.1. Factorization algebras	351
20.2. Factorization algebras and chiral algebras	354
20.3. The Grassmannian and factorization spaces	358
20.4. Examples of factorization algebras	363
20.5. Factorization and the chiral Hecke algebra	369
20.6. Bibliographical notes	374
Appendix	375
A.1. Discs, formal discs and ind–schemes	375
A.2. Connections	377
A.3. Lie algebroids and \mathcal{D} –modules	378
A.4. Lie algebra cohomology	380
Bibliography	383
Index	393
List of Frequently Used Notation	397
