<i>List of Figures</i>	xvii
<i>List of Tables</i>	xxvi
1 Introduction	1
1.1 Some aspects of the history of wavelets	1
1.2 The scope of this book	4
1.3 Outline	6
2 Multiscale approximation and multiresolution	9
2.1 The Haar system	9
2.1.1 Projection by interpolation	9
2.1.2 Orthogonal projection	12
2.2 Piecewise linear systems	17
2.3 Similar properties	24
2.3.1 Stability	24
2.3.2 Refinement relation	25
2.3.3 Multiresolution	26
2.3.4 Locality	27
2.4 Multiresolution analysis on the real line	28
2.4.1 The scaling function	29
2.4.2 When does a mask define a refinable function?	30
2.4.3 Consequences of the refinability	31
2.5 Daubechies orthonormal scaling functions	35
2.6 B-splines	37
2.6.1 Centralized B-splines	38
2.7 Dual scaling functions associated to B-splines	39
2.8 Multilevel projectors	43
2.9 Approximation properties	46
2.9.1 A general framework	46
2.9.2 Stability properties	48
2.9.3 Error estimates	49
2.10 Plotting scaling functions	50
2.10.1 Subdivision	51
2.10.2 Cascade algorithm	55
2.11 Periodization	57
2.12 Exercises and programs	58

3	Elliptic boundary value problems	63
3.1	A model problem	63
3.1.1	Variational formulation	64
3.1.2	Existence and uniqueness	68
3.2	Variational formulation	70
3.2.1	Operators associated by the bilinear form	74
3.2.2	Reduction to homogeneous boundary conditions	75
3.2.3	Stability	75
3.3	Regularity theory	76
3.4	Galerkin methods	77
3.4.1	Discretization	77
3.4.2	Stability	78
3.4.3	Error estimates	78
3.4.4	L_2 -estimates	82
3.4.5	Numerical solution	83
3.5	Exercises and programs	85
4	Multiresolution Galerkin methods	87
4.1	Multiscale discretization	87
4.2	Multiresolution multiscale discretization	89
4.2.1	Piecewise linear multiresolution	89
4.2.2	Periodic boundary value problems	90
4.2.3	Common properties	94
4.3	Error estimates	95
4.4	Some numerical examples	96
4.5	Setup of the algebraic system	97
4.5.1	Refinable integrals	98
4.5.2	The right-hand side	101
4.5.3	Quadrature	101
4.6	The BPX preconditioner	102
4.7	MultiGrid	104
4.8	Numerical examples for the model problem	108
4.9	Exercises and programs	115
5	Wavelets	120
5.1	Detail spaces	120
5.1.1	Updating	120
5.1.2	The Haar system again	121
5.2	Orthogonal wavelets	124
5.2.1	Multilevel decomposition	124
5.2.2	The construction of wavelets	126
5.2.3	Wavelet projectors	129
5.3	Biorthogonal wavelets	131
5.3.1	Biorthogonal complement spaces	132

5.3.2	Biorthogonal projectors	133
5.3.3	Biorthogonal B-spline wavelets	134
5.4	Fast Wavelet Transform (FWT)	134
5.4.1	Decomposition	141
5.4.2	Reconstruction	143
5.4.3	Efficiency	145
5.4.4	A general framework	145
5.5	Vanishing moments and compression	147
5.6	Norm equivalences	150
5.6.1	Jackson inequality	151
5.6.2	Bernstein inequality	152
5.6.3	A characterization theorem	152
5.7	Other kinds of wavelets	156
5.7.1	Interpolatory wavelets	157
5.7.2	Semiorthogonal wavelets	161
5.7.3	Noncompactly supported wavelets	163
5.7.4	Multiwavelets	164
5.7.5	Frames	166
5.7.6	Curvelets	166
5.8	Exercises and programs	167
6	Wavelet-Galerkin methods	170
6.1	Wavelet preconditioning	170
6.2	The role of the FWT	175
6.3	Numerical examples for the model problem	177
6.3.1	Rate of convergence	177
6.3.2	Compression	181
6.4	Exercises and programs	184
7	Adaptive wavelet methods	186
7.1	Adaptive approximation of functions	186
7.1.1	Best N -term approximation	187
7.1.2	The size and decay of the wavelet coefficients	190
7.2	A posteriori error estimates and adaptivity	191
7.2.1	A posteriori error estimates	192
7.2.2	Ad hoc refinement strategies	194
7.3	Infinite-dimensional iterations	200
7.4	An equivalent ℓ_2 problem: Using wavelets	203
7.5	Compressible matrices	205
7.5.1	Numerical realization of APPLY	215
7.5.2	Numerical experiments for APPLY	216

7.6	Approximate iterations	221
7.6.1	Adaptive Wavelet-Richardson method	221
7.6.2	Adaptive scheme with inner iteration	224
7.6.3	Optimality	226
7.7	Quantitative efficiency	232
7.7.1	Quantitative aspects of the efficiency	232
7.7.2	An efficient modified scheme: Ad hoc strategy revisited	234
7.8	Nonlinear problems	238
7.8.1	Nonlinear variational problems	239
7.8.2	The DSX algorithm	241
7.8.3	Prediction	243
7.8.4	Reconstruction	246
7.8.5	Quasi-interpolation	249
7.8.6	Decomposition	252
7.9	Exercises and programs	254
8	Wavelets on general domains	257
8.1	Multiresolution on the interval	258
8.1.1	Refinement matrices	260
8.1.2	Boundary scaling functions	262
8.1.3	Biorthogonal multiresolution	271
8.1.4	Refinement matrices	284
8.1.5	Boundary conditions	287
8.1.6	Symmetry	291
8.2	Wavelets on the interval	292
8.2.1	Stable completion	292
8.2.2	Spline-wavelets on the interval	297
8.2.3	Further examples	304
8.2.4	Dirichlet boundary conditions	307
8.2.5	Quantitative aspects	323
8.2.6	Other constructions on the interval	325
8.2.7	Software for wavelets on the interval	327
8.2.8	Numerical experiments	328
8.3	Tensor product wavelets	335
8.4	The Wavelet Element Method (WEM)	342
8.4.1	Matching in 1D	344
8.4.2	The setting in arbitrary dimension	357
8.4.3	The WEM in the two-dimensional case	372
8.4.4	Trivariate matched wavelets	386
8.4.5	Software for the WEM	387
8.5	Embedding methods	390
8.6	Exercises and programs	391

9	Some applications	394
9.1	Elliptic problems on bounded domains	394
9.1.1	Numerical realization of the WEM	394
9.1.2	Model problem on the L-shaped domain	395
9.2	More complicated domains	401
9.2.1	Influence of the mapping – A non-rectangular domain.	401
9.2.2	Influence of the matching	403
9.2.3	Comparison of the different adaptive methods	406
9.3	Saddle point problems	407
9.3.1	The standard Galerkin discretization: The LBB condition	409
9.3.2	An equivalent ℓ_2 problem	410
9.3.3	The adaptive wavelet method: Convergence without LBB	412
9.4	The Stokes problem	417
9.4.1	Formulation	417
9.4.2	Discretization	418
9.4.3	B-spline wavelets and the exact application of the divergence	419
9.4.4	Bounded domains	423
9.4.5	The divergence operator	425
9.4.6	Compressibility of \mathbf{A} and \mathbf{B}^T	427
9.4.7	Numerical experiments	428
9.4.8	Rate of convergence	429
9.5	Exercises and programs	434
A	Sobolev spaces and variational formulations	437
A.1	Weak derivatives and sobolev spaces with integer order	437
A.2	Sobolev spaces with fractional order	443
A.3	Sobolev spaces with negative order	445
A.4	Variational formulations	446
A.5	Regularity theory	452
B	Besov spaces	455
B.1	Sobolev and Besov embedding	457
B.2	Convergence of approximation schemes	459
C	Basic iterations	462
