Contents

Acknowledgments	vii
Preface	ix
1. Active crustal subduction and exhumation in Taiwan Cheng-Horng Lin and Steven W. Roecker	1
2. Melting of crustal rocks during continental collision and subduction Alberto E. Patiño Douce and T.C. McCarthy	27
3. Rheology of crustal rocks at ultrahigh pressure Bernhard Stöckhert and Jörg Renner	57
4. Thermal controls on slab breakoff and the rise of high-pressure rocks during continental collisions J. Huw Davies and Friedhelm von Blanckenburg	97
5. Exhumation of ultrahigh-pressure rocks: Thermal boundary conditions and cooling history Bernhard Grasemann, Lothar Ratschbacher, and Bradley Hacker	117
6. Active tectonics and ultrahigh-pressure rocks Ann E. Blythe	141
7. K-Ar ($^{40}\text{Ar}/^{39}\text{Ar}$) geochronology of ultrahigh pressure rocks Stéphane Scaillet	161
8. Geochemical and isotopic characteristics of UHP eclogites and ultramafic rocks of the Dabie orogen: Implications for continental subduction and collisional tectonics Bor-ming Jahn	203
9. Stable isotope geochemistry of ultrahigh-pressure rocks Douglas Rumble	241
10. Tracing the extent of a UHP metamorphic terrane: Mineral-inclusion study of zircons in gneisses from the Dabie Shan Hirokazu Tabata, Kazuhiro Yamauchi, Shigenori Maruyama, and Juhn G. Liou	261
11. H ₂ O recycling during continental collision: Phase-equilibrium and kinetic considerations W. Gary Ernst, Jed L. Mosenfelder, Mary L. Leech, and Jun Liu	275
12. Influence of fluid and deformation on metamorphism of the deep crust and consequences for the geodynamics of collision zones Håkon Austrheim	297
