SUPPLEMENT TO NASA TECHNICAL MEMORANDUM X-3185

WIND-TUNNEL INVESTIGATION OF HELICOPTER-ROTOR WAKE
EFFECTS ON THREE HELICOPTER FUSELAGE MODELS

John C. Wilson and Raymond E. Mineck

Langley Directorate, U.S. Army Air Mobility R&D Laboratory

INTRODUCTION

The effects of rotor downwash on helicopter fuselage aerodynamic characteristics were investigated in the Langley V/STOL tunnel. A rotor model for generating the downwash was mounted close to each of three fuselage models. The main report presents the force and moment data in both graphical and tabular form and the pressure data in graphical form. This supplement presents the pressure data in tabular form. Each run or parameter sweep is identified by a unique run number. The data points in each run are identified by a point number. The pressure data can be matched to the force data by matching the run and point number.

SYMBOLS

The symbols used in the tabulation are defined as follows:

ALPHA	fuselage angle of attack, deg (see fig. 1, main text)
BETA	fuselage angle of sideslip, deg (see fig. 1, main text)
BODY LHS	pressure coefficient on left-hand side of body (fuselage)
BODY RHS	pressure coefficient on right-hand side of body (fuselage)
BOTT C/L	pressure coefficient on center line of fuselage bottom

C_p pressure coefficient, $\frac{\text{Measured pressure} - \text{Free-stream static pressure}}{\text{Free-stream dynamic pressure}}$

PYLON LHS pressure coefficient on left-hand side of the rotor pylon

PYLON RHS pressure coefficient on right-hand side of rotor pylon

TOP C/L pressure coefficient on center line of fuselage top

UPPER FLANK LHS pressure coefficient on left-hand upper flank of top of fuselage

UPPER FLANK RHS pressure coefficient on right-hand upper flank of top of fuselage

X/L position of pressure orifice in fraction of fuselage length

Details of the model and the location of pressure orifices are presented in figure 2 and table I of the main report.

PROGRAM LISTING

The data are presented as follows:
