## Preface

Writing this thesis was akin to a long journey. I got a great deal of pleasure out of it, but as I was approaching the end of it, I was looking forward to coming home and to making plans for the next voyage. On my journey I had the best company one could ever wish for, the impressive Operations Management group in Groningen. Indeed, so many people showed me the way that it is impossible to name them all.

My supervisor, Gerard Gaalman, aroused my interest in the field of Operations Management while I studied Econometrics and Operations Research at the University of Groningen. As an instructor he made a lasting impression. He still serves as an example to me, both as an individual and as a scientist. Wim Nawijn from the University of Twente joined the supervision team later. He always made time whenever I contacted him and has been a great help.

During my journey I had the pleasure of sharing ideas with many European colleagues in the field of Workload Control. Our meeting point has often been the inspiring environment of Igls in Austria. I have very fond memories of the meetings with Linda Hendry, Mark Stevenson, Alberto Portioli-Staudacher, Donatella Corti, Henny van Ooijen, Günther Zäpfel, Hubert Missbauer, Manfred Gronalt, and, of course, Jan-Wilhelm Breithaupt and Peter Nyhuis with whom I wrote one of the articles in this thesis. Peter Henrich joined our Workload Control crew in Groningen and makes enthusiastic contributions to our research.

Brian Kingsman from Lancaster University has been extremely stimulating to me. His untimely death, which occurred just before the completion of my journey, made me feel that I had arrived too late. Our plans for future co-operation will now never go beyond the stage of dreams. I will miss him at my thesis defence but the memory of Brian will always be with me.

It is a great honour to have Marco Perona and Wil Bertrand, two other highly respected researchers in the field of Workload Control, on the Assessment Committee. Among all his other research interests, Marco Perona keeps our European collaboration in Workload Control alive. His energy is inexhaustible and contagious. Wil Bertrand wrote his seminal thesis on Workload Control more than twenty years ago, and it remains one of the richest sources for research in that field.

Jacob Wijngaard is one of the committee members and has been a great boss. His creativeness, pragmatism, drive and humour are unparalleled. Under Jacob's direction a dynamic Production Management department has been developed. With my current colleagues Gera, Jan, Leonieke, Manda, Marjan, Marjo, Renny, Taco, the words 'colleagues' and 'friends' have become synonymous. I also owe thanks to many other (ex)colleagues, and in particular Manon and Klaske who created a haven for me at WSN 817 for many years.

My 'paranimfen' Jan Riezebos and Bas Oosterman mean a lot to me. Jan introduced me to the field of Operations Management. I continue to learn from him and I really enjoy working with him. Bas contributed to chapter 7 of this thesis. He is not only a great friend, but he was also a jovial colleague who brightened up my WSN days for many years.

My parents have always been there for me, offering their unconditional love. Last but not least, I turn my attention to Antheia. She is a wonderful source for support and inspiration. This journey would not have been complete without her.

# Contents

<b>Chapter 1</b>	<b>Introduction.....</b>	<b>1</b>
1.1	Research backgrounds .....	1
1.2	Objectives and research questions .....	4
1.3	Thesis outline .....	6
<b>Chapter 2</b>	<b>Job shop control .....</b>	<b>7</b>
2.1	Performance in job shops.....	8
2.1.1	Utilisation/throughput .....	9
2.1.2	Inventories .....	10
2.1.3	Lead times.....	11
2.1.4	Delivery reliability .....	12
2.2	Job acceptance and due date assignment .....	13
2.3	Job release.....	15
2.3.1	Infinite loading methods .....	16
2.3.2	Finite loading methods.....	16
2.4	Dispatching .....	18
2.4.1	Conserving flow.....	18
2.4.2	Improving throughput .....	18
2.4.3	Reducing the dispersion of lateness .....	19
2.4.4	Combined rules .....	20
2.5	Job shop control in this thesis .....	21
<b>Chapter 3</b>	<b>The workload control (WLC) concept .....</b>	<b>22</b>
3.1	Workloads and throughput times .....	23
3.1.1	The relationship visualised.....	23
3.1.2	Little's result .....	26
3.1.3	The role of processing time units .....	29
3.1.4	A decomposition of workloads and throughput times .....	30
3.2	The WLC decision framework.....	32
3.2.1	Entry level.....	33
3.2.2	Release level .....	34
3.2.3	Dispatching level .....	35
3.3	The classical WLC release methods .....	35
3.3.1	The basic release procedure .....	36
3.3.2	Workload measures.....	37
3.3.3	Workload norms and other parameters .....	42

3.4	Extensions and adjustments of the classical WLC methods .....	47
3.4.1	Inclusion of downstream loads to reduce feedback requirements .....	47
3.4.2	Intermediate release .....	48
3.4.3	Pool restrictions .....	49
3.5	Analysis and considerations .....	50
3.5.1	Timing qualities .....	50
3.5.2	Balancing qualities: realising the norm level .....	51
3.5.3	Balancing: direct load indicating qualities of the workload measures .....	52
3.6	Detailed research questions .....	56
	Appendix chapter 3 .....	58
<b>Chapter 4</b>	<b>Performance of the WLC release methods .....</b>	<b>60</b>
4.1	Experimental design .....	60
4.1.1	Job and shop characteristics .....	60
4.1.2	Entry .....	62
4.1.3	Release .....	63
4.1.4	Priority dispatching .....	65
4.1.5	Performance measurement .....	66
4.2	Results .....	69
4.2.1	Performance overview .....	69
4.2.2	Load balancing .....	74
4.2.3	Timing .....	78
4.3	Sensitivity .....	80
4.3.1	Utilisation level .....	81
4.3.2	Planned station throughput time .....	82
4.3.3	Length of the release period .....	86
4.3.4	Time limit .....	89
4.4	Summary and assessment of results .....	91
	Appendix chapter 4: simulation parameters .....	93
<b>Chapter 5</b>	<b>Redesign of WLC release methods .....</b>	<b>97</b>
5.1	WLC without norms: SLAR .....	97
5.1.1	Design principles .....	98
5.1.2	SLAR .....	103
5.1.3	SLAR in chapter 6 .....	106
5.2	Norm improvement: corrected aggregate loads .....	107
5.2.1	Design principles .....	107
5.2.2	Corrected aggregate loads .....	110
5.2.3	Corrected aggregate loads in chapter 7 .....	112
	Appendix chapter 5 .....	113

<b>Chapter 6</b>	<b>WLC without norms (article)</b> .....	<b>115</b>
6.1	Introduction.....	115
6.2	Job release within workload control (WLC) concepts .....	116
6.2.1	Two classical approaches of workload control .....	118
6.2.2	The release procedure .....	120
6.3	A simulation of the WLC release methods .....	121
6.3.1	Modelled release procedure .....	122
6.3.2	Experimental design.....	122
6.3.3	Simulation results.....	124
6.3.4	Discussion of results .....	126
6.3.5	Opportunities for improvement.....	129
6.4	An alternative release approach for workload control .....	130
6.4.1	Release method based on the two release principles.....	132
6.5	Simulation results .....	134
6.5.1	Discussion of results .....	137
6.6	Conclusions.....	139
<b>Chapter 7</b>	<b>Norm improvement (article)</b> .....	<b>141</b>
7.1	Introduction.....	141
7.2	The workload control (WLC) concept and job release .....	142
7.3	Three approaches of workload control.....	144
7.4	Expected influences of shop characteristics.....	148
7.5	Experimental design.....	149
7.5.1	Release methods.....	149
7.5.2	Shop configurations .....	151
7.5.3	Workload norms and performance measurement.....	153
7.6	Simulation results .....	154
7.7	Discussion of results .....	156
7.7.1	The influence of variable station positions and routing lengths.....	156
7.7.2	The influence of a directed flow .....	157
7.8	Conclusions.....	159
<b>Chapter 8</b>	<b>Conclusions</b> .....	<b>160</b>
8.1	General conclusions .....	160
8.1.1	Timing and balancing performance .....	161
8.1.2	Influence of norm types and norm levels .....	163
8.1.3	Sensitivity to other factors .....	164
8.2	WLC without norms .....	166
8.3	Norm improvement.....	169
8.4	Final remarks .....	171

<b>Appendix A (article)</b> .....	<b>173</b>
A.1 Introduction.....	173
A.2 The workload control paradigm.....	175
A.3 Existing WLC concepts .....	177
A.3.1 Bechte's WLC concept.....	178
A.3.2 Bertrand's WLC concept.....	180
A.3.3 Tatsiopoulos' WLC concept.....	182
A.3.4 Other methods of controlled release .....	184
A.4 Workload definitions and shop floor stationarity.....	185
A.4.1 Bechte: Queue only.....	186
A.4.2 Bertrand: Queue and upstream included .....	187
A.4.3 Tatsiopoulos: Queue, upstream and downstream included .....	188
A.5 The timing/balancing conflict and pool stationarity .....	190
A.6 Conclusions and suggestions for further research.....	192
<b>Appendix B (article)</b> .....	<b>194</b>
B.1 Introduction.....	194
B.2 The workload control (WLC) concept .....	197
B.2.1 General principles .....	197
B.2.2 LOOR (Load-Oriented Order Release) .....	198
B.3 Strengths and weaknesses .....	201
B.3.1 Use of norms .....	201
B.3.2 Reducing and balancing workloads .....	203
B.3.3 LOOR-specific aspects .....	204
B.4 LOOR – extensions based on experiences from practice.....	206
B.4.1 Determination of appropriate parameter values .....	206
B.4.2 Uncertainties during the load conversion procedure.....	211
B.4.3 Rejection of orders caused by overloaded downstream centres .....	212
B.5 Conclusions.....	213
<b>Summary</b> .....	<b>215</b>
<b>Samenvatting</b> .....	<b>221</b>
<b>References</b> .....	<b>227</b>
